**Performance curves**

### Vacuum operation

- **Suction capacity V [cfm]**
- **Total pressure difference Δp [inch H₂O]**
- **Power consumption P at pump shaft [HP]**
- **Temperature rise ΔT of conveyed air [°F]**

### Compressor operation

- **Suction capacity V [cfm]**
- **Total pressure difference Δp [inch H₂O]**
- **Power consumption P at pump shaft [HP]**
- **Temperature rise ΔT of conveyed air [°F]**

The performance curves are based on air at a temperature of 59 °F and an atmospheric pressure of 401.53 inch H₂O with a tolerance of ± 10%. The total pressure differences are valid for suction and ambient temperature up to 77 °F. For other conditions please get in touch with us.

Every G-BH pump can be used both as vacuum pump and compressor in continuous operation over the total performance curve range. The motors are available as standard in protection category IP 55 and insulation class F. The vacuum pumps / compressors are UL and CSA approved.

1) In case of frequency converter operation the standard motor insulation system is suitable for converter input voltages up to 460 V.

2) Relief valves available for limiting differential pressure.

3) Measuring surface sound pressure level acc. to EN ISO 3744, measured with an equivalent unit at a distance of 1 m. The pump is throttled to an average suction pressure, with piping connected, but no relief valves fitted, tolerance ±3 dB (A).

All G-BH fulfil the 2006/42/EC (machinery) and 2006/95/EC (low voltage) directives and the EN 60034-1 norm “Rotating electrical machines”.

The motors comply with EN 60 034-1 / 2 / 30 (IEC 60034) and thermal class F.

For three phase motors tolerances are +/-10% for fixed voltage motors and +/-5% for voltage range motors. Single phase machines are designed with a +/- 5% tolerance. The frequency tolerance is +/- 2% maximum.
