

Printing Industry

AIRCOM Technologies has been involved in this market since 1998. Our ability to select and apply the correct equipment for the printing industry applications is based on technical knowledge and a complete range of products. Please call us to review your project requirements.

Claw vacuum pumps

ZEPHYR

These high efficiency, dry and frictionless compression claw vacuum pumps are low maintenance and contain an integrated air cooling without additional cooling medium. These are the perfect choice for vacuum packaging applications. Capacity 72-600 m³/hr (42.4-353 cfm) at 60 Hz, continuous vacuum up to 100 mbar (abs.) / 27.0 in.HgV.

Regenerative blowers

These compact and quiet blowers are applied for flow rates below 800 cfm and pressures below 13 psig. Flow is easily controlled with speed.

Drying Applications

Air Knife Drying Systems

The biggest selling points of these systems are not only their durability and superior performance but their energy efficiency compared to other blowers, performance can be matched using 25% to 50% less power.

We offer on site and in house repair, maintenance contract, system optimization, as well as a wide range of filters, silencers and instrumentation.
